ARYAN MANKAME

Full Stack Developer

About Me :

Passionate about learning new skills and aspects of new domains and want to be a contributor of the era where technology has actually become a backbone of every industry, every problem of mankind can be solved through technology. I'm available for being part of any futuristic idea or vision and specially the one where a new race of intelligence is created by a creature that already exists.

PROJECTS

H.O.W(House on Wheels)

ReactJS | Django

- The front end is built using Reactjs where the login and signup authentication is made using django used for backend.
- The website is a carvaan booking website which provides you an awesome travel experience.

WasteBin

ReactJS | Express.js | MongoDB | Flask | ML

- A end-to-end solution for waste management where we collect the waste from the users sell to the recycler's and list the recycled products.
- Login Auth is made using firebase
- ML model for predicting the type of waste is deployed on replit where in flask is used for request handling
- The Front-End is built using React.js backend using express.js and mongoDB is used for database.
- Functionalities : Waste type prediction ,selling the waste,collector dashboard, order's displayed on calander, purchase portal.

DISNEY HOTSTAR CLONE

ReactJS | Firebase | Redux

- Features : Signup using google auth, searching a movie, adding movies to watchlist.
- Front-End : React JS is used for designing the frontend , Redux is used to store the data in redux store.
- Back-End: Firebase is used to store the info about movies and the watchlist data of users.

Dhwani

Python

- A desktop voice assistant made using python libraries like pywhatkit ,
- Features : Sends whatsapp messages via voice command, calculates based on voice command sets an alarm.

EDUCATION

BTECH COMPUTER SCIENCE 2020 - 2024

MAULANA AZAD NATIONAL INSTITUTE OF TECHNOLOGY, BHOPAL

CGPA: 8.88
